Section 2: Health Care Claim: Dental

Introduction

The ASC X12N 837 (005010X224A2) transaction is the HIPAA mandated instrument by which professional claim or encounter data must be submitted. Any claim that would be submitted on a HCFA/CMS-1500 claim form must be submitted using this transaction if the data is submitted electronically.

This document is intended only as a companion guide to and is not intended to contradict or replace any information in the EDI Implementation Guides (IG). It is highly recommended that implementers have the following resources available during the development process:

- This document, *Companion Guide – 837 Health Care Claim: Dental*
- *ASC X12N 837 0005010X224 Implementation Guide*
- *ASC X12N 837 0005010X224A1 Implementation Guide Errata*
- *ASC X12N 837 0005010X224A2 Implementation Guide Errata*

A 999 – *Implementation Acknowledgement* file will be sent to acknowledge all 837 transaction sets that are sent to ISDH. An 835 – *Payment Advice* will be sent for all HIPAA Compliant 837 claims. See the companion guides for these transactions on our web site for more information: <http://www.cshcs.in.gov> and then going to the EDI Solutions section.

Additionally, there are several processing assumptions, limitations, and guidelines a developer must be aware of when implementing the 837P transaction. The following list identifies these processing stipulations:

- **ISDH will be validating at the ST-SE level. We recommend that you take this into consideration when deciding how many claims to submit within a single ST-SE as a single error will cause the entire transaction set (ST-SE) to be rejected.**

Segment Usage – 837 Dental

The following matrix lists all segments within the 5010A2 version of the 837D IG. The ISDH Usage column indicates which segments are required, situational or not used by ISDH. A required segment element must appear on all transactions. Failure to include a required segment results in a compliance error. A situational segment is not required for every type transaction; however, a situational segment may be required under certain circumstances. Any data in a segment that is identified in the *Usage* column with an **X** is ignored by ISDH. Any segment identified in the *Usage* column as required or situational is explained in detail in the *Segment and Data Element Description* section of the document.

Segment and Data Element Description

This section contains a tabular representation of any segment required or situational for the ISDH HIPAA implementation of the 837P. Each segment table contains rows and columns describing different segment elements.

Segment Name – The industry assigned segment name as identified in the *IG*.

Segment ID – The industry assigned segment ID as identified in the *IG*.

Loop ID – The loop within which the segment should appear.

Usage – Identifies the segment as required or situational.

Segment Notes – A brief description of the purpose or use of the segment.

Example – An example of complete segment.

Element ID – The industry assigned data element ID as identified in the *IG*.

Usage – Identifies the data element as R-required, S-situational, or N/A-not used.

Guide Description/Valid Values – Industry name associated with the data element. If no industry name exists, this is the *IG* data element name. This column also lists in **BOLD** the values and/or code set to be used.

Comments – Description of the contents of the data elements including field lengths.
